SUMMARY

Full Stack Developer focused on secure, high performance architecture. Driven to build scalable backend systems and deliver seamless, modern user experiences.

TECHNICAL SKILLS

Languages: C, C++, JavaScript, MySQL, MongoDB, Java.
Technologies & Tools: React.js, Node.js, Express.js, Git, GitHub, Spring Boot, Docker, CI/CD pipelines.
Concepts: REST APIs, JSON, WebSockets, WebRTC, Microservices, Apache Kafka

EDUCATION

PUNE INSTITUTE OF COMPUTER TECHNOLOGY **Sep 2024 - Present**
B.Tech in **COMPUTER ENGINEERING**
CGPA - 9.40/10
Relevant Coursework: Object Oriented Programming (OOP) in C++, Database Management Systems (DBMS), Discrete Maths, Data Structures and Algorithms (DSA), Computer Organisation and Architecture, Operating Systems, Basic System Design

PROJECTS

Tether - Microservice Impact Analyzer

- Built an event-driven platform that detects breaking API contract changes across microservices before pull requests are merged.
- Developed a Spring Boot webhook service to capture GitHub Pull Request events and publish them to Apache Kafka for asynchronous processing.
- Implemented Kafka-based event streaming to decouple ingestion and analysis, enabling scalable and reliable processing of pull request events.
- Built asynchronous Java workers to analyze code diffs using the DeepSeek LLM and identify potential downstream API contract violations.
- Developed a Chrome extension that retrieves analysis results from MongoDB and displays a vulnerability graph directly within the GitHub Pull Request interface.
- **Tech Stack:** Java, Spring Boot, Apache Kafka, MongoDB, JavaScript, Chrome Extension API, GitHub Webhooks, DeepSeek LLM

Chatify - Real-Time Messaging & Video App

- Built a full-stack real-time messaging platform supporting concurrent instant text chat and live video calls within a single, unified interface.
- Integrated WebRTC for peer-to-peer video calls, using WebSockets to exchange network details (ICE candidates) and establish direct, low-latency connections between users.
- Created a "Whisper Mode" for private conversations, using MongoDB TTL (Time-To-Live) to automatically delete messages from the database shortly after they are read.
- **Tech Stack:** MERN Stack, WebSockets (Socket.io), WebRTC, MongoDB

ACHIEVEMENTS

- Participated in multiple hackathons, contributing to the end-to-end development of full-stack applications within strict timelines.
- Collaborated in fast-paced team environments to transform ideas into functional prototypes using modern web technologies.
